Medical Spa Services

Medically Directed Skin Care

We strive to carry products backed by thorough scientific research. Many of our products are stronger and more effective than over-the-counter preparations and are available only through physicians' offices. Our product lines include:

- Physician's Choice of Arizona
- Neova
- Jane Iredale Cosmetics
- Obagi
- Procyte

As an additional service, a limited number of prescription skin medications are available at competitive prices through our office.

Skin Evaluation and Consultation

Our medical professionals perform a comprehensive evaluation of your skin and help draft a treatment plan customized to your skin type and goals.

SilkPeel Dermal Infusion™

The next generation in microdermabrasion, SilkPeel is the first patented treatment to combine non-invasive exfoliation with delivery of skin-specific topical solutions to improve and revitalize skin. All treatments include an AHA skin preparation and complimentary mask customized to your skin's needs.

Chemical Peels

We use medical grade peels from Physicians Choice of Arizona. For certain skin conditions, we may also use Jessner's or TCA (trichloroacetic acid) peels.

Chemical peels can be an integral part of basic skin care maintenance.

Chemical peels also effectively treat a number of skin conditions, including:

- Acne
- Rosacea
- Hyperpigmentation (brown spots)
- Photoaging (wrinkles)

Our medical professionals can help determine which peels are appropriate for you and your skin care goals.

Botox Cosmetic®

Used clinically for over 20 years, Botox Cosmetic® treatments are a simple and safe procedure to relax facial muscles and improve the appearance of dynamic facial wrinkles such as frown lines, crow's feet, and forehead creases. Consultation included.

Restylane® Juvéderm™ and Collagen Replacement Therapy®

Minimize the appearance of facial wrinkles including nasolabial folds, marionette lines, and brow furrows. Choose between longer lasting Restylane® or Juvéderm™ (hyaluronic acid) and traditional Zyplast® (collagen). A complimentary skin test is required for Zyplast®. Consultation included.

Laser Center Services

Laser Consultation

Consultation with a medical professional is required prior to all laser center services to select appropriate treatment, discuss expectations and review pre- and post-treatment skin care.

Photorejuvenation

Broad Band Light (BBL), also known as Intense Pulsed Light (IPL) or Photofacial, sets new standards for the treatment of fine wrinkles, age & sun spots, and small facial veins. Multiple treatments are required, but there is absolutely no downtime.

Sciton MicroLaserPeel™

An ideal treatment for patients seeking more correction than microdermabrasion or chemical peels but who have little time for the prolonged healing of deeper laser peels. Rejuvenates skin and improves fine wrinkles, scaling, and brown spots. Multiple treatments are typically required to reach desired results while minimizing downtime.

Varilite Facial Vein Treatment

Varilite is a non-invasive, in-office laser treatment to permanently remove facial vascular lesions and pigmented skin lesions. Varilite treatments are ideal for patients with acne rosacea.

BBL™ (Broad Band Light) Hair Removal

Broad Band Light treatments target pigment in the hair shaft to affect hair growth. Safe and comfortable treatments can achieve long-term results. Multiple treatments are required.

CoolTouch Varia Leg Vein Treatment

An Nd:YAG laser with cryogen spray epidermal cooling that safely and selectively targets the dark spider veins deep in the dermis, while cooling and protecting the surface of the epidermis. Treatments may be performed safely in all skin colors and at any time of the year. Multiple treatments are typically required.

Sciton Contour™ Laser Skin Peel

The Contour™ is an Er:YAG laser used for deep skin resurfacing to rejuvenate your skin. Wrinkles soften and become less noticeable; some will disappear altogether. Pigmented lesions will greatly improve. Generally performed as a single treatment; expect some downtime for recovery.

UltraPulse Encore™ Laser Skin Resurfacing

Ultrapulse CO₂ laser skin resurfacing is the strongest tool to remove years of sun damage, soften deep facial wrinkles, and achieve more youthful skin. Generally performed as a single treatment; expect some downtime for recovery.
